

# GeoExplorer

## Instructions

To install and run the GeoExplorer plugin, follow these steps:

1. Download the plugin ZIP file from Carmen Canvas
2. Launch QGIS
3. Go to the "Plugins" menu in QGIS
4. Select "Manage and Install Plugins"
5. Click on "Install from ZIP"
6. Click on the "..." and navigate to the GeoExplorer zip file
7. Click on "Install Plugin"
8. Hit "Close" to close the Plugins window

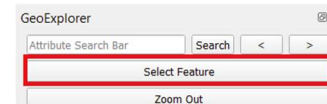

To use the plugin:

*Note: The plugin requires only one active layer to function properly. If you encounter any issues with the plugin, ensure that one layer is selected in the QGIS Layers Panel.*

1. Select a layer from the QGIS Layers Panel
2. Click the GeoExplorer icon (  ) to open the plugin
3. The plugin's dock widget will open on the right side of the QGIS window
4. When finished using the plugin, click on the "X" in the top-right corner of the dock widget to close the plugin

To Identify a Feature

1. Click the "Select Feature" button; this will activate the select cursor
2. Use the select cursor to select a feature and explore its attributes in the dock widget

To Search for a Feature

1. Type something in the "Attribute Search Bar"
2. Click the "Search" button, or hit the "return" key on your keyboard to search
3. All results from the search will be located in the dock widget
4. Select either of the arrow buttons to go through all the search results

To Zoom to and Center on Feature

1. Search or select as normal
2. Automatic Zoom/Center is activated
3. Use the "Zoom Out" button to return to a feature class wide zoom level
